## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. Applicant's request for continuing examination filed 6/27/07 has been fully considered and entered. The information disclosure statement (IDS) submitted on 6/21/07 and 6/27/07 was filed after the mailing date of the Notice of Allowance on 4/11/07. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

### ***Response to Arguments***

2. As previously set forth, Applicant's remarks filed 1/8/07 have been fully considered and entered. Applicant's arguments regarding the rejection of claims 1-8 rejected under 35 U.S.C. 103(a) as being obvious over Sawyer et al., US 3,369,932 in view of Mao et al., EP 0 841 351 A2 are found persuasive. As such, these rejections are hereby withdrawn. Claims 1-8 are found allowable for reasons set forth herein below.

### ***Allowable Subject Matter***

3. The following is an examiner's statement of reasons for allowance: Claims 1-8 are found allowable over the combination of cited prior art set forth above. Specifically, the primary reference of Sawyer et al., teach a blend which is moisture vapor resistant whereas the instant blend coating requires the passage of water vapor through the coating. In addition, the primary reference of Sawyer et al., requires at least 60 moles of ethylene per 100 moles of alkene. Thus, although the secondary reference of Mao et al., teach the claimed polymer emulsion there is a lack of motivation to substitute the polymer emulsion of Mao et al., in the wax-polymer blend of

Sawyer et al. Additionally, the polymer emulsion of Mao et al., is directed to providing a pressure sensitive adhesive whereas the polymer emulsion of Sawyer et al., directed to forming moisture vapor resistant film coatings. As such, it is the position of the Examiner that a lack of motivation exists to combine the teachings of Sawyer et al., with Mao et al. Further, the pressure sensitive adhesive of Mao et al., does not exhibit the claimed water vapor permeability and there is no evidence from Mao et al., that blending the polymer emulsion with the paraffin wax emulsion of Sawyer et al., .0000would result in a barrier coating which is sufficient to prevent the passage of aqueous fluids but allow the passage of water vapor through the barrier coating. An updated art search did not produce any new substantial for which to base a rejection and presently no motivation exists to combine references to form an obviousness type rejection.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
